

Strategic Fuel Supply

We not only offer nationwide fuel supply, but we have the people, systems, and expertise to evaluate your total costs of ownership associated with fuel to ensure cost containment and affordability as fuel costs fluctuate.

How Do We Do It?

We examine your facilities, dispensing equipment, delivery patterns, consumption, inventories, fleet size, contracts, and various back-office operations to determine your total current fuel costs. We analyze this information and create a strategic solution to help you control your costs.

Solutions to Control Fuel Costs

Mansfield has the most comprehensive fuel network in the nation. We maintain supply and distribution agreements with all the major refiners throughout the United States. This enables us to offer you low-cost purchasing strategies that are comprehensive in scope and scale to cover all of your fuel needs at every location. We can also provide retail purchase optimization and tracking that encompasses every dollar spent on fuel from over the road purchases to bulk fuel at your facilities.

Data Driven Optimization

We track more than 200,000 price changes daily, and offer you the best balance between price optimization and supply reliability each and every day. Using our least cost routing matrix, we examine alternate terminal facilities to determine the best supply origin for your next delivery, balanced with your forecast demand and available delivery windows for each location.

Mansfield can help you control costs by customizing a complete fuel supply or logistics management solution for your organization. We'll help you get your fuel to the right place, at the right time.

During fuel procurement, we provide a variety of purchasing methods to help you meet your cost goals. We also can help you manage your price risks, and we offer several fuel risk management options that can be tailored to your needs.
